Education

The University of Texas at Dallas

Master of Science in Information Technology

May 2024

Dallas, TX

Visvesvaraya National Institute of Technology

Bachelor of Technology in Computer Engineering

May 2022

Nagpur, India

Experience

WWC P.C.

Aug 2024 – Present

Software Engineer

Dallas, TX

- Early engineer at AiBi, a WWC-backed AI-powered audit and accounting suite, embedded with auditors at WWC. Owned features from design through production in TypeScript and Python. Used Cursor (Grok), Claude Code, etc. to move faster. Typical API + UI + deploy went from 1–2 weeks to 3–5 days.
- Built the UI in TypeScript and Solid.js (lazy-loaded editor), cutting dashboard and sign-up first paint from 4–6s to 2s.
- Used Datadog RUM with China users to RCA a geo split, then self-hosted fonts and put CDN (AWS CloudFront) in front of static assets, bringing APAC load time from 6–10s to under 2s.
- Containerized the app multiple microservices with Docker, so the same image promoted across 3 environments and a rollout finished in 5–8 minutes.
- Wrote Kubernetes manifests on AWS EKS (Deployment, Service, Ingress/ALB, HPA, PDB, IRSA, migrate Jobs): frontend scales 3–15 pods, PDB min 3 keeps rolling deploys available via Github Actions, and there have been 0 downtime incidents since leaving EC2.
- Implemented the Fastify API with Zod at the boundary, layered handlers, Postgres, S3, JWT/RBAC, and multi-pod SSE (Server-Side Events), so live updates went from 4–6s full reloads to 300ms.
- Scripted Python jobs against AWS APIs (CloudWatch deploy metrics, S3 env bootstrap) and wired them into GitHub Actions, so a failed rollout showed up in 5 minutes instead of 30–60 minutes of user reports.
- Shipped RAG on Postgres/pgvector (HNSW)—chunk, embed, retrieve—plus MCP tools, a multi-agent graph, schema-constrained output, and NDJSON/SSE, so time-to-first-token went from 30–90s to 1–2s.

Commscope

May 2023 – Aug 2023

Software Engineer Intern

Dallas, TX

- Designed and implemented responsive user interfaces in React for internal telecom tooling, refactoring key components and layouts to support cross-device usage, contributing 15% improvement in user satisfaction scores.
- Introduced automated testing with Playwright, reducing post-release defects by 25%.

University of Texas at Dallas - Office of Information Technology

Aug 2022 – May 2023

Student Enterprise Developer

Dallas, TX

- Implemented and maintained SSO/MFA integrations using Microsoft Entra, closing authentication policy gaps for a user base of 5,000+ students/staff.
- Built JavaScript-driven internal tools and SQL-backed reporting queries that automated data extraction previously done manually, saving the IT operations team roughly 15 hours per week.
- Developed Power BI dashboards and Excel-based tracking reports covering 10+ IT service metrics.

EY (Ernst and Young)

Apr 2021 – Oct 2021

Software Engineer Intern

Pune, India

- Built SQL pipelines to consolidate and clean supply chain data across client systems, cutting manual data-prep time by 6–8 hours per deliverable
- Prototyped PyTorch/TensorFlow forecasting models flagging 12+ at-risk SKUs ahead of stockout for 2 engagements.

Technical Skills

Languages: Python, TypeScript, Javascript, HTML, CSS, YAML, R, SQL

Technologies: Solid.js, Node.js, Astro, Fastify, PostgreSQL, AWS (EC2, Route 53, EKS, RDS, S3, CloudFront, SES), Terraform, Kubernetes, Docker, GitHub Actions, SSE, OpenAI/Anthropic, LangGraph, Datadog, Playwright, Auth.js / Entra, PAdES · Cursor, Claude Code, Copilot, Codex

Concepts: Operating System, Virtual Memory, Cache Memory, Encryption, Decryption, Artificial Intelligence, Machine Learning, Neural Networks, API, Database Normalization, Agile Methodology, Cloud Computing
