

Abhishek Deshpande

📍 Dallas, TX 📞 945-233-4239 ✉ abhishekdeshpande222@gmail.com [🌐 LinkedIn](#) [🐙 GitHub](#) [📁 Portfolio](#)

Education

The University of Texas at Dallas

Master of Science in Information Technology

May 2024

Dallas, TX

Visvesvaraya National Institute of Technology

Bachelor of Technology in Computer Engineering

May 2022

Nagpur, India

Experience

WWC P.C.

Aug 2024 – Present

Software Engineer

Dallas, TX

- Built the UI in TypeScript/Solid.js with a lazy-loaded editor, self-hosted fonts, and AWS CloudFront, using Datadog RUM to RCA an APAC geo-latency issue — cut APAC load time from 6–10s to under 2s.
- Containerized the app into multiple microservices with Docker and authored Kubernetes manifests (Deployment, Service, ALB Ingress, HPA, PDB, IRSA) on AWS EKS, enabling 5–8 minute promotions across 3 environments with 0 downtime incidents since migrating off EC2.
- Built RESTful Fastify APIs with Zod validation, layered handlers, Postgres, S3, JWT/RBAC, and multi-pod Server-Sent Events, replacing 4–6s full-page reloads with 300ms live updates.
- Automated deployment health checks with Python scripts against AWS APIs (CloudWatch, S3) wired into GitHub Actions, shrinking failed-rollout detection from 30–60 minutes of user reports to 5 minutes.
- Shipped a RAG pipeline on Postgres/pgvector (HNSW) with MCP tools, a multi-agent graph, and schema-constrained NDJSON/SSE output, cutting time-to-first-token from 30–90s to 1–2s.

Commscope

May 2023 – Aug 2023

Software Engineer Intern

Dallas, TX

- Designed and implemented responsive user interfaces in React for internal telecom tooling, refactoring key components and layouts to support cross-device usage, contributing 15% improvement in user satisfaction scores.
- Introduced automated testing with Playwright, reducing post-release defects by 25%.

University of Texas at Dallas - Office of Information Technology

Aug 2022 – May 2023

Student Enterprise Developer

Dallas, TX

- Implemented and maintained SSO/MFA integrations using Microsoft Entra, closing authentication policy gaps for a user base of 5,000+ students/staff.
- Built JavaScript-driven internal tools and SQL-backed reporting queries that automated data extraction previously done manually, saving the IT operations team roughly 15 hours per week.
- Developed Power BI dashboards and Excel-based tracking reports covering 10+ IT service metrics.

EY (Ernst and Young)

Apr 2021 – Oct 2021

Software Engineer Intern

Pune, India

- Built SQL pipelines to consolidate and clean supply chain data across client systems, saving manual time by 6–8 hours.
- Prototyped PyTorch/TensorFlow forecasting models flagging 12+ at-risk SKUs ahead of stockout for 2 engagements.

Projects

Claimguard | LangGraph, FastAPI, Celery, Postgres + pgvector, Next.js, Langfuse

- Built a multi-agent insurance-claims triage system with a RAGAS-based eval harness scoring fraud-detection precision/recall and policy-citation groundedness against a held-out test set.

Waypoint | NestJS, Prisma, BullMQ, Next.js, Postgres, Redis

- Built a multi-tenant incident-response platform with RBAC-enforced tenancy isolation and durable on-call escalation, verified via Playwright e2e and 42 passing tests, with 0 cross-tenant data leaks under adversarial testing.

Technical Skills

Languages: Python, TypeScript, Javascript, HTML, CSS, YAML, R, SQL

Technologies: Solid.js, Node.js, Astro, Fastify, PostgreSQL, AWS (EC2, Route 53, EKS, RDS, S3, CloudFront, SES), Terraform, Kubernetes, Docker, GitHub Actions, SSE, OpenAI/Anthropic, LangGraph, Datadog, Playwright, Auth.js / Entra, Cursor, Claude Code, Copilot, Codex

Concepts: Operating System, Virtual Memory, Cache Memory, Encryption, Decryption, Artificial Intelligence, Machine Learning, Neural Networks, API, Database Normalization, Agile Methodology, Cloud Computing
